

SURUBELNITE

Manere cu design ergonomic

La calitatea superioara a materialelor folosite pentru gama de surubelnite Unior se adauga manere de concepie ergonomica care permit o excelenta calitate a prizei.

Manere tri material

Multumita asocierii suprafetelor rigide cu cele mai moi, manerul special cu trei componente (brevetat Unior) permite o folosire eficace si confortabila care solicita putin incheietura in timpul lucrului

Priza antiderapanta

Concepute pentru a se adapta la o mare varietate de profile de suruburi si avand un maner din tricomponent, surubelnitele Unior asigura o mare eficacitate si o priza anti alunecare.

Manerele TBI pentru surubelnite sunt compuse din trei straturi, dupa cum urmeaza:

Strat 1: Polipropilena neagra, care inconjura axul surubelnitei si care este extrem de dura si aderenta, prevenind roitrea axului in maner la cupluri mari

Strat 2: Polipropilena albastra, care incoonoara primul strat. Este foarte rigida si asigura forma constanta a manerului fata de diverse sollicitari exterioare.

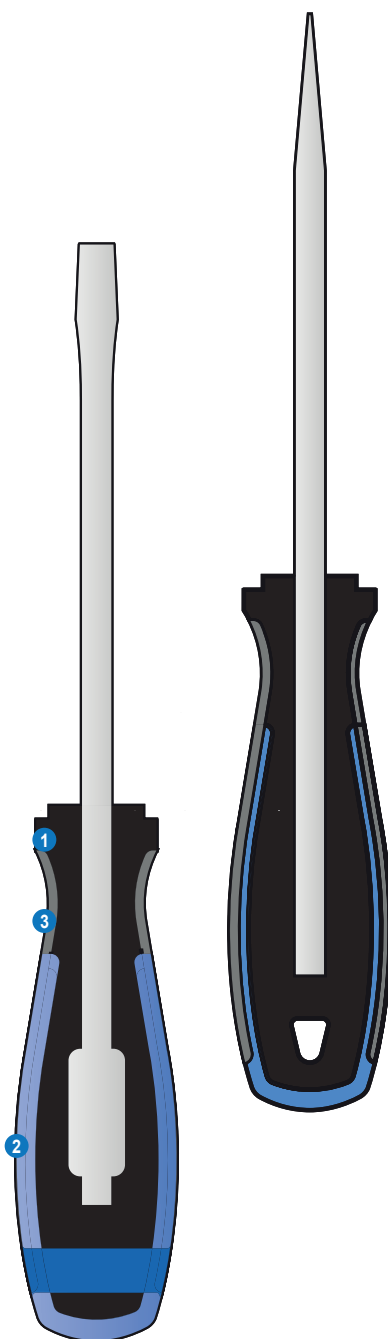

Strat 3: TPE gri (elastomer termoplastic) care inconjura partial stratul 2 al manerului, este un material de rezistenta medie care da manerului forma finala ergonomica, asigura o prindere placuta si aderenta si - consecinta - realizarea unor cupluri mari.

Capabile sa se potriveasca cu o varietate mare de profiluri de suruburi si avand manerele tri-component, surubelnitele Unior asigura o eficienta sporita si o prindere antiderapanta

Surubelnitele sunt facute din otel crom-vanadiu-molybden si sunt in plus cromate sau nichelate. Calitatea superioara a materialelor folosite in linia Unior de surubelnite este complementata de manerele ergonomice care furnizeaza o prindere excelenta.

Cu combinatia de suprafete dure si moi, manerele speciale din trei componente - un patent Unior - asigura confortul si performanta eficienta cu tensiuni minime asupra incheieturii in timpul lucrului.

Impreuna cu consistenta variata a manerului de plastic, practic eliminand riscul de alunecare a surubelnitei in mana, prinderea imbunatatita asigura de asemenea si un cuplu sporit. Acesta poate fi obtinut si prin introducerea unei tije in perforatia facuta in acest scop in toate manerele, gaura care poate fi folosita si la agatarea la depozitare.

Surubelnite drepte	257
Surubelnite cu profil Phillips	259
Surubelnite cu profil Pozidrive	260
Surubelnite cu cap sferic si pentru cap hexagonal	261
Surubelnite cu profil TORX®	262
Surubelnite patrate si cu cap tubular	262
Seturi de surubelnite	262
Magnetizor	265

Cuplu de strangere mai mare

Nu numai ca materialul compozit al manerului elimina practic orice risc de alunecare a surubelnitei in mana, dar cea mai buna calitate a prizei obtinuta in acest fel este obtinerea unui cuplu de strangere mai mare. Acelasi efect poate fi obtinut de asemenea (cu exceptia manerelor de lemn) inserand o tija in gaura adaugata in acest scop tuturor manerelor noastre si care poate de asemenea servi la o mai buna organizare prin suspendare

600CS5TBI

Set surubelnit mecanice cu hexagon maner trimaterial TBI, cromate **-+**

UNIOR
