## CKF-319 with adjustable start and return time

## PURPOSE

Phase loss and phase sequence sensor is designed to protect electric motor powered from the three-phase network in following cases:

* voltage loss in at least one phase;
* voltage drop in at least one phase below 150 V ;
* voltage increase in at least one phase above 280 V;
* voltage asymmetry between phases above the set value;
* incorrect phase sequence

## CZF-334 with 2 separated contacts ( $2 \times \mathrm{NO} / \mathrm{NC}$ )

## PURPOSE

The CZF-334 phase loss sensor without neutral wire is designed to protect electric motor powered from the three-phase network in following cases:

* voltage loss in at least one phase;
* voltage drop in at least one phase below 320 V ;
* voltage increase in at least one phase above 480 V ;
* voltage asymmetry between phases above the set value.
