

# Contactors

## KMI AC contactors

KMI AC contactors of general industrial purpose are designed for load currents from 9 to 95 A (AC-3). They are intended for actuating, shutting down and reversing of asynchronous motors equipped with a short-circuited rotor for the applied voltage limited to 660V, remote control of lighting (AC-5a, AC-5b), heating circuits and various low-inductance loads (AC-1), switching three-phase capacitor batteries (AC-6b) and primary windings of three-phase low-voltage transformers (AC-6a).

All unit types per load currents limited to 40 A have a single group of auxiliary NO or NC contacts.

Types per load currents exceeding 40 A have two contact groups (NO and NC).

KMI AC contactors 9-95 A application includes fan, pump, thermal curtain, furnace, overhead-track hoist, unit, lighting and automated load transfer systems control.

Design and technical features of KMI compact contactors meet requirements of international and Russian standards. According to its constructive and technical features, KMI AC contactors meet the requirements of international standards EN 60947-1, EN 60947-4-1, EN 60947-5-1

### Advantages

- Broadened range of KMI compact contactors as compared to the similar products from domestic manufacturers on Russian market.
- Wide range of optional devices readily available in the stock (PKI contact attachments, PVI time-delay attachments, RTI thermal relays).

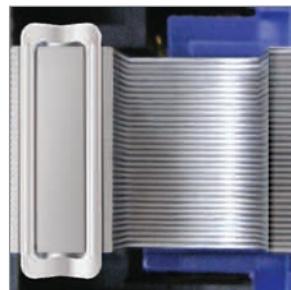

- Installation on 35 mm DIN rail is possible (other domestic manufacturers offer this fixing only as optional feature).
- Reverse version can be obtained using the interlocking mechanism.

## Design Features

Special oval terminal contacts ensure a secure conductor fixation:

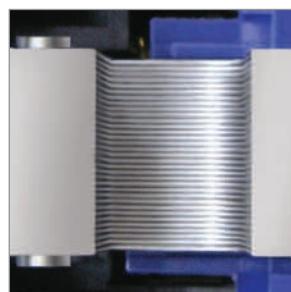

- for dimensions 1 and 2 – with tempered disk spring washers;
- for dimensions 3 and 4 – with a c-clamp allowing connecting a wider section contact.

Short-circuited aluminum rings pressed into polar tips of the magnetic system's stationary part are provided for preventing detonation.

Notches on terminal contacts provide for lowering the wire heating owing to the secure fixation in places of connection and boosting the overall contact area.

As a result of applying a unique manufacturing technology, when being in operation the magnetic system ensures an optimum exploitation (no noise and boosted contact system reliability).

Integrated auxiliary contacts. Each contactor up to 32 A is supplemented with an auxiliary contact: 1 NO or 1 NC. Contactors from 40 up to 95 A are completed with two auxiliary contactors: 1 NO+1 NC.

There are two ways to install the contactors:

1. Fast DIN-rail mounting:  
KMI from 9 up to 32 A (dimensions 1 and 2) – 35 mm; KMI from 40 up to 95 A (dimensions 3 and 4) – 35 and 75 mm.
2. Screw installation onto a mounting panel or profile.

## Range
