

Shear Bolt cable lugs up to 36kV

For applications up to 36kV

Suitable for Al and Cu conductors

Certified according to EN61238-1 class A

MOREK

Shear Bolt cable lugs up to 36kV

Shear Bolt lugs are used for terminating aluminium or copper conductors in applications up to 36kV.

Advantages

• Shear Bolt technology allows installation of the lugs using a regular wrench or a spanner, no crimping or other special tools are needed.

• Morek Shear Bolt cable lugs are range taking products that can be used with conductors of varying cross-sections, accommodating a wide range of conductors with only a few items.

 Shear Bolt lugs' specially designed aluminium bodies are made of high-strength aluminium alloy and are tin-plated, allowing their use with both aluminium and copper conductors.

• Bolts made of aluminium or tin-plated brass are designed to break at the exact torque required for best electrical connection.

• Shear Bolts and barrels of lugs are treated with special antioxidation grease to ensure the lubrication and eliminate all kinds of oxidation in places of electrical contact.

• Conductor centering rings and instruction manual are supplied together with each lug to ensure proper installation.

• All Morek Shear Bolt lugs are watertight and suitable for indoor and outdoor installation, to be used with solid, stranded, sector shaped and round conductors with plastic or oil-impregnated paper isolation. • Shear Bolt lugs are compatible with most termination kits by many manufacturers. Compact design requires less installation space, especially for larger sizes.

Certification and regulations

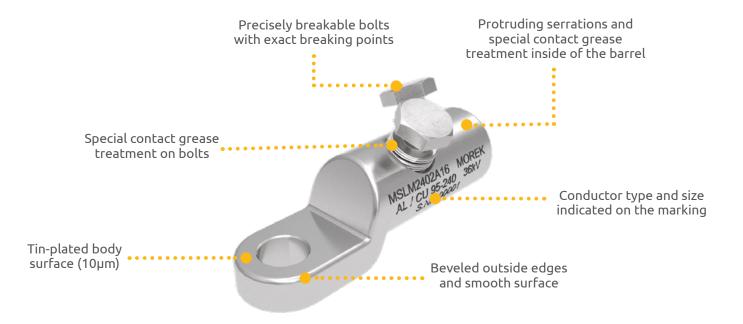

Tested according to IEC61238-1 class A

Technical specifications

- Nominal voltage up to 36kV
- Suitable for copper and aluminium conductors
- Bolts and barrels are treated with antioxidation grease
- Conductor centering rings included

Materials

Lug body: tin-plated high-strength aluminium alloy Aluminium-bolt cable lug bolts: aluminium alloy Brass-bolt cable lug bolts: tin-plated brass

EN 61238-1:2003 divides cable lugs and connectors into two classes:

Class A (heat cycle and **short-circuit tested**) - These are connectors intended for electrical distribution or industrial networks in which they can be subjected to short-circuits of relatively high intensity and duration. Therefore, Class A connectors are suitable for most applications.

Class B (heat cycle tests only, **not short-circuit tested**) - These are connectors for networks in which overloads or short-circuits are rapidly cleared by the installed protective devices, e.g. **fast-acting fuses.**
