Harmony Timer Relays
Near Field Communication and conventional Timer Relays

Harmony Timer Relays
Innovative, ergonomic and configurable offer with single or multifunction types

Harmony Timer are timing relays designed to time events in industrial automation systems by closing and opening contacts before, during, or after a set time period. They are designed for hard-wired logic automated systems to complement the functions of industrial progammable logic controllers (PLCs).

They are suitable for a wide range of applications, including:

■ Machines: single machine, and industrial automation and processes
■ Buildings: lighting control, access control door locks, roller shutters
■ Water segment: pumping and irrigation systems
■ HVAC: fans and centralized water systems

Depending on the product model, these relays support multiple time ranges.
> Modular DIN rail mounted timing relays

RE17, RENF, RE22

> Miniature plug-in timing relays   > Panel mounted/plug-in timing relays

REXL   *RE48A*

The Harmony Timer relays also feature:

■ Wide power supply range from 24 to 240 V $\sim$
■ Single or multi timing ranges from 0.02 s to 999 hrs
■ Screw or spring connection terminals
■ Relay or solid-state output
■ Conformity to IEC 61812-1 and EN 61812-1 standards
■ UL, CSA, GL, RCM, EAC, CCC, and China ROHS compliance
■ Easy to set up with wiring diagrams on the side of the product

Harmony RE22 Timing relays

Modular relays with unique features
> Innovative: dial pointer LED indicator and diagnostic button to assist setup and troubleshooting
> Compact and reliable
> Energy efficient: simple to implement, operate, and maintain
> Compliance with standards and certifications
> QR code embedded in instruction sheet for easy setup

Dial pointer LED indicator

Diagnostic button

Harmony Timer Relays ➜ A complete range of reliable and flexible offers

Schneider Electric

Harmony Timer Relays
Near Field Communication and conventional Timer Relays

Applications	These timing relays enable simple automation cycles to be set up using wired logic. They can also be used to complement the functions of PLCs.			
Output	**Solid state** Timing relays with solid state output reduce the amount of wiring required (wired in series). The durability of these timing relays is independent of the number of operating cycles.		**Relay** Relay outputs provide complete isolation between the supply circuit and the output. It is possible to have several output circuits.	

| Type	Modular and DIN rail mounted			
Connection	Screw type	Spring type	Screw type	Spring type
Time ranges	□ *7 ranges:* 1 s, 10 s, 1 min, 10 min, 1 h, 10 h, 100 h		Depending on model: □ *6 ranges* 1 s, 10 s, 1 min, 10 min, 1 h, 10 h □ *7 ranges:* 1 s, 10 s, 1 min, 10 min, 1 h, 10 h, 100 h

Definitions

The following definitions explain relay operation:

■ **Relay output:**

This is the most common type of output. When the relay is energized, the moving armature is attracted by the coil and so actuates the contacts, which change state. When the relay is de-energized, both the armature and the contacts revert to their initial position. This type of output allows complete isolation between the power supply and the output. There are three types of output contact:

CO: Changeover contact, i.e. when the relay is de-energized, the circuit between the common point C and NC is closed and when the relay is operating (coil energized), it closes the circuit between the common point C and the NO contact.	C NC / NO
NC: A contact that is closed without being actuated is called a **Normally Closed (NC)** contact.	NC
NO: A contact that closes when actuated is called a **Normally Open (NO)** contact.	NO

■ **Solid state output:**

This output is entirely electronic and involves no moving parts; service life is therefore increased.

■ **Breaking capacity:**

The current value that a contact is capable of breaking in specified conditions.

■ **Mechanical durability:**

The number of mechanical operating cycles of the contact or contacts.

■ **Minimum switching capacity** (or minimum breaking capacity):

This is the minimum required current that can flow through the contacts of a relay.

■ **X1/X2/Y1/Gate control input:**

Control input allows timing in progress to be interrupted without it being reset.

Functions

Timing functions are identified by letters. For the complementary functions, select the main timing function using the selection dial in the front panel; refer to functional diagrams for connection.

Main timing functions	Complementary functions (1)	Definitions
A *(2)*		Power on-delay relay
	Ac	On-delay and off-delay relay with control signal
	Act	On-delay and off-delay relay with control signal and pause/summation control signal
	Ad	Pulse delayed relay with control signal
	Ah	Pulse delayed relay (single cycle) with control signal
	Ak	Asymmetrical on-delay and off-delay relay with control signal
	Akt	Asymmetrical on-delay and off-delay relay with control signal and pause/summation control signal
	At	Power on-delay relay with pause/summation control signal
	Aw	Power on-delay relay with retrigger/restart control signal
B *(2)*		Single interval relay with control signal
	Bw	Double interval relay with control signal
C *(2)*		Off-delay relay with control signal
	Ct	Off-delay relay with control signal and pause/summation control signal
D *(2)*		Symmetrical flashing relay (starting pulse-off)
	Di *(2)*	Symmetrical flashing relay (starting pulse-on)
	Dit	Symmetrical flashing relay (starting pulse-on) with pause/summation control signal
	Diw	Symmetrical flashing relay (starting pulse-on) with retrigger/restart control signal
	Dt	Symmetrical flashing relay (starting pulse-off) with pause/summation control signal
	Dw	Symmetrical flashing relay (starting pulse-off) with retrigger/restart control signal
H *(2)*		Interval relay
	He	Pulse-on de-energization
	Ht	Interval relay with pause/summation control signal
	Hw	Ineterval relay with retrigger/restart control signal
K		Delay on de-energization (without auxiliary supply)
L *(2)*		Asymmetrical flashing relay (starting pulse-off)
	Li *(2)*	Asymmetrical flashing relay (starting pulse-on)
	Lit	Asymmetrical flashing relay (starting pulse-on) with pause/summation control signal
	Lt	Asymmetrical flashing relay (starting pulse-off) with pause/summation control signal

(1) Complementary functions enhance the main timing functions.
*   Example: **Ac**: timing after closing and opening of control contact.*
(2) The most commonly used timing functions.

Near Field Communication and conventional Timer Relays

Definitions (continued)

Main timing functions	Complementary functions (1)	Definitions
N		Safe-guard relay
O		Delayed Safe-guard relay
P		Pulse delayed relay with fixed pulse length
	Pt	Pulse delayed relay with fixed pulse length and pause/summation control signal
Q		Star-delta relay (2 NO outputs with same common)
	Qc	Star-delta relay (1 CO output)
	Qe	Star-delta relay (1 NC + 1 NO outputs with split common)
	Qg	Star-delta relay (2 CO outputs with same common)
	Qgt	Star-delta relay (2 CO outputs with same common) with pause/summation control signal
	Qt	Star-delta relay (2 CO outputs with split common)
	Qtt	Star-delta relay (2 CO outputs with split common) with pause/summation control signal
T	Tl	Bistable relay with control signal on
	Tt	Retriggerable bistable relay with control signal on
W		Interval relay with control signal off
	Wt	Interval relay with control signal off and pause/summation control signal

Selection table

Selection criteria

■ **Functions** (on-delay or off-delay, counter, flashing, etc.)
■ **Supply voltage** (example: ⎓ 12 V…240 V)
■ **Timing range** for a timing relay (for example; 0.05 s…100 h)
■ **Type of output** (contact or solid state) and required **Number of contacts**
■ **Rated current** or **Breaking capacity** of contacts, expressed in Amperes. This is the maximum current that may flow through the contacts.

Functions	Timing range	Supply voltage	Type of output	Rated current	Relay
A	0.1 s…100 h	⎓ 12 V	2 CO contacts	5 A	REXL2TMJD
			4 CO contacts		
		⎓ 24 V	2 CO contacts		REXL2TMBD
			4 CO contacts		REXL4TMBD
		∼ 24 V	2 CO contacts		REXL2TMB7
			4 CO contacts		REXL4TMB7
		∼ 120 V	2 CO contacts		REXL2TMF7
			4 CO contacts		REXL4TMF7
		∼ 230 V	2 CO contacts		REXL2TMP7
			4 CO contacts		REXL4TMP7
		⎓∼ 24…240 V	1 solid state output	0.7 A	RE17LAMW
					RE17LAMWS
	0.02 s…300 h	⎓∼ 24…240 V	2 CO contacts	5 A	RE48ATM12MW
A, Ac, At, B, Bw, C, D, Di, H, Ht	0.1 s…100 h	⎓∼ 24…240 V	1 solid state output	0.7 A	RE17LMBM
		⎓∼ 12 V	1 CO contact	8 A	RE17RMJU
		⎓∼ 12…240 V			RE17RMMW
					RE17RMMWS
		⎓ 24 V/ ∼ 24…240 V			RE17RMMU
					RE17RMMUS
			2 CO contacts		RE22R2MMU
		⎓∼ 12 V			RE22R2MJU
		⎓∼ 12…240 V			RE22R2MMW

(1) Complementary functions enhance the main timing functions.
 Example: Ac: timing after closing and opening of control contact.

Note: References ending with "S" are spring terminals; references without "S" are screw terminals.

Example: RE17LAMWS is timing relay with spring terminal and RE17LAMW is timing relay with screw terminal
